                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CTAGCCACAACTA 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Laboratory mouse DNA RESOURCE (http://www.jax.org/resources/documents/dnares/). The DNA (http://www.jax.org/resources/documents/dnares/). The sheared by repeated passage through a was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA 0.005 inch orifice at constant velocity. The sheared DNA was blunt ends in TA DNA polymerase and T4 was blunt ends in high molar excess. The ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to adaptored DNA was purified are agarose gel 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwp42 (gi|4732114|gb|AF129072.1), a copy-number of pwp42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XI10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             11 a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      catalytic DNA molecules which can be used for cleaving target nucleic acid molecules. Such DNA molecules can be used in pharmaceutical and medical products (e.g. for wound debridement, clot dissolution), as well as in household items (e.g. detergents, dental hygiene products, meat tenderisers'). Other suitable substrates include those comprising or produced by picornaviruses, hepadnaviridae, (e.g. HBV, HCV), pammaherpesvirinae (e.g. EBV), lymphocryptoviruses, leukemia viruses (e.g. HFLV-1 and -11), produced by the control of 
                                                                                                                                                                     The present invention relates to a method for identifying sites on a target RNA which are accessible to pairing by antisense DNA, ribozymes of DNAzymes. The present sequence is a DNAzyme catalytic core sequence. In the method of the present invention the target sequence is incubated with DNAzymes, antisense oligonucleotides or ribozymes (such as the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       lymphocryptoviruses, leukemia viruses (e.g. HTLV-1 and -11), flaviviruses, togaviruses, herpesviruses (including alphaherpesviruse flaviviruses, cottomegaolviruses (CMV), influenza viruses, viruses and retroviruses contributing to immunodeficiency diseases and syndromes (e.g. HiV-1 and -2), simian and feline immunodeficiency viruses and bovine leukemia viruses. They can also be used as regulators
                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying sites on a target or in vitro-synthesized RNA accessible antisense, ribozyme, or DNAzyme binding comprises incubating hybridizing the target RNA with an antisense oligodeoxynucleotides,
                                                        present sequence). Any antisense oligonucleotide, ribozyme or DNAzym which is complementary to an accessible site in the target sequence hybridises to that site and the sequence is cleaved. The cleavage products can then be detected to identify the accessible binding sit
